

CHANGES MADE : JOB 1 (A)

REASON WHY

The first job, in which I was given when I returned to work, required a lot of results, which needed working out. I was told to do this with a calculator.

On a weekly basis, this job needed approximately 600 results working out. But it required about 1800 basic calculations to get 600 results.

This took a great deal of time up. But it was just the start of the actual job. So I knew that I had to do something about it.

So, I came up with something to cut a lot of time off that job. I think, at least 10 hours.

The following pages show an example of the screen I made, in order to make the job easier.
